RIDGE POLE SWAG

IS THERE ANYTHING MORE AUSSIE, THAN TO ROLL OUT YOUR SWAG, LIGHT A FIRE AND CRACK A TINNY?

We love a swag as much as you do, so we've made some updates to what we believe is our best Ironman 4x4 swag yet. It's even got an awning!

The new Ridge Pole Swag by Ironman is a completely new design; moving away from the three-hoop concept to a simplified two-hoop with tensioning centre ridge pole. It's not a new concept, but one that simplifies set-up and pack-up. It also offers greater internal volume, with no tapering at the waist and legs, whilst remaining compact in transit like a traditional swag.

What's really important in a ridge-pole design, is the quality of materials. A genuine 420gsm poly-cotton canvas gives the swag structural integrity in the dome to minimize drooping. The base is constructed of a 600gsm PVC, but again here what really matters is the height of the base, which wraps 100mm up the swag walls. This depth is what protects you and the mattress from ground water seepage in inclement weather.

RIDGE POLE SWAG

Let's talk mattresses! This is no eggshell mattress with a deceptive height to density ratio, we're talking a full 70mm high density foam mattress; there'll be no peas felt here princess!

Protection from bugs and insects is provided through a sandfly-proof mesh on all windows, and windows are plenty with full length access on both sides of the swag. Rolling up the poly-cotton access doors reveals a 180-degree view of the night's sky, while at both the head and foot ends are zipped access to meshed windows for improved airflow.

A great feature of the Ironman 4x4 Ridge Pole Swag is the included awning poles, which allow you to transform the swags entry flap into an awning for increased shelter from rain and frost. Additionally, each swag is sold with a complementary PVC shoe storage cover to keep your swag clean and your boots dry!

The swags also come with a full set of guy ropes to tension out the rain flaps at each end as well as the awning poles, however, given the type of design, the swag can be set-up free standing without guy ropes in dry and calm conditions.

Ironman 4x4 swags come complete with a canvas carry bag.

SWAG VS TENTS

While tents are often a lighter alternative, the construction of a poly-cotton canvas swag offers far greater temperature control, keeping the hot sun of the day out for a cooler place to rest your head, and the heat in at night for a cozy sleep. Swags are naturally dark for improved sleep-ins, and due to their water-proof nature do not require additional fly covers.

One of the biggest advantages of a swag is the mattress, which will never lose air and go flat, and conveniently rolls up and lives in the swag.

With less poles, less pegs and less guy ropes, a swag sets up and packs up in minutes giving you more time to enjoy the things about camping you love best.

RIDGE POLE SWAG

FUN FACTS

PRE-SEASONING YOUR SWAG

It is important to soak your swag! The way canvas and stitching works, you need your swag to get completely wet and then completely dry so the canvas and stitching can contract and expand to properly seal the canvas and stitching, creating a truly watertight above. The best method is to set up the swag, remove the mattress, zip up all of the windows and awning then swag the canvas until completely wet. Allow to fully dry then repeat the process. Check for any leaks in the seams and use a wax stick on the seams where any moisture is showing.

VENTILATION IS KEY!

Heavy duty canvas is great for keeping water and sun out while providing great temperature control. However, when you're all tucked up in bed on a cold night, you need to allow for ventilation to avoid condensation build up. It can be a pain the morning when you go to roll up your swag and the inside is wet from condensation, leave the head and foot windows open for fresh air and ventilation to minimize condensation.

MOISTURE EQUALS MILDEW

If you want a nice clean and fresh smelling swag every time you open it, be sure not to pack it away wet! Even condensation or excess dampness on the PVC base when rolling the swag can be cause for your swag to start to grow mold when in storage. When rolling your swag, wipe the PVC base with a fresh cloth or towel as you go, or when you get home set it up somewhere dry for 24 hours and pack it down again.

AWNINGS MAKE IT EASY

While your swag is waterproof, setting up under an awning keeps mildew, condensation, and precipitation to a minimum. So if you have the option to set up under an awning, you will be grateful in the morning for a dry swag that is super easy to roll up and pack away.

RIDGE POLE SWAG

FEATURES NOT TO FORGET

When comparing your options between a tent and swag, keep in mind some of the key areas that make an Ironman 4x4 Ridge Pole Swag easier:

- Quick and easy set up and pack-down, three poles and you're done
- A proper high density 70mm mattress.
- Sturdy design with the centre pole creating a freestanding dome swag
- 180° view of the stars
- Side awning poles and carry bag included
